

OFFLINE MAP FACTORY 1.0 - INSTALLATION GUIDE

Windows 10 / 11 | QGIS 3.44.9 | Python 3.14.5

INSTALL ONCE. AFTER SETUP, THE OPERATOR ONLY RUNS THE BAT FILE.

1. INSTALL QGIS 3.44.9

1. Download QGIS 3.44.9 Solothurn LTR for 64-bit Windows from the official QGIS download site.
2. Use the normal standalone / offline Windows installer.
3. Keep the default install location: C:\Program Files\QGIS 3.44.9
4. Finish the installation. Do not substitute a newer QGIS version for this Factory.

Factory 1.0 is pinned to QGIS 3.44.9.

2. INSTALL PYTHON 3.14.5

1. Download Python 3.14.5 - Windows installer (64-bit) from python.org. Do not use the embeddable ZIP.
2. Run the normal installer. Leave the Python launcher enabled and add Python to PATH when the installer offers the option.
3. Finish the installation. Factory 1.0 expects Python 3.14.

3. PLACE THE TWO QGIS PROJECT FILES

Create this exact folder:

C:\Google Earth Project\QGIS

Copy these two supplied files into that folder with their names unchanged:

REQUIRED_FACTORY_PROJECT_DO_NOT_EDIT.qgz
ESRI and Google Labels.qgz

IMPORTANT: Right-click REQUIRED_FACTORY_PROJECT_DO_NOT_EDIT.qgz -> Properties -> check Read-only -> Apply. Do not rename, move, or edit either QGZ file.

4. KEEP THE FACTORY TOGETHER

Extract the supplied package completely. The BAT file and System Files folder must stay together in the same folder:

RUN OFFLINE MAP FACTORY.bat
System Files

5. FIRST RUN

1. Make sure QGIS Desktop is closed.
2. Double-click RUN OFFLINE MAP FACTORY.bat.
3. If the Factory window opens normally, installation is complete.
4. Use the User Guide and make a small test map before starting a large build.

SETUP COMPLETE = FACTORY OPENS + BOTH QGZ FILES PASS ITS STARTUP CHECK.

Internet is needed to manufacture online-source maps; finished map files are local.
