

OFFLINE MAP FACTORY 1.0 - QUICK USER GUIDE

4 map sources | Zoom 0-20 | TPKX / MBTiles / Both

GOAL: Choose the map, choose the area, choose the detail, build the finished offline files.

1. START THE FACTORY

1. Open the OFFLINE MAP FACTORY 1.0 folder.
2. Double-click RUN OFFLINE MAP FACTORY.bat.
3. Leave the System Files folder alone. The Factory uses it automatically.
4. If QGIS Desktop is open, close it before starting a build.

2. CHOOSE THE MAP SOURCE AND AREA

Google Earth - satellite imagery	Google Hybrid - imagery + roads / labels
Esri World - Esri imagery	Esri World / Google Labels - Esri imagery + labels

Choose the map area using ONE of these methods:

- A. Paste a saved HOME EXTENT - order: xmin, xmax, ymin, ymax.
- B. Load two diagonal points from Windows Clipboard History.
- C. Enter two diagonal GPS points manually as Latitude,Longitude.

3. CHOOSE ZOOM AND FINISHED OUTPUT

1. Set Min zoom and Max zoom. The Factory accepts zoom levels 0 through 20.

HIGHER MAX ZOOM = MORE DETAIL AND A MUCH LARGER BUILD.
Use only the detail you actually need.

2. Check TPKX, MBTiles, or both.

TPKX	Finished compact tile package for ArcGIS Earth and compatible offline deployment.
MBTiles	Compact raster tile master / interchange file.
Both	Keeps the MBTiles master and creates the matching TPKX deployment file.

4. BUILD THE MAP

1. Click BUILD MAP.
2. Choose the destination and name the finished map.
3. Review the build summary, then choose Yes to begin.
4. Wait for the Factory to report COMPLETE. Do not open QGIS Desktop or disconnect the destination while it is building.

IF YOU CHOSE BOTH, THE .TPKX AND .MBTILES USE THE SAME MAP NAME.
The finished files are ready for offline deployment.

5. ADVANCED TOOL - EXISTING MBTILES TO TPKX

Already have a raster MBTiles file? Open ADVANCED TOOLS, choose Tool 1 - MBTiles -> TPKX, select the MBTiles, name the TPKX, and let the converter package it. This tool does not rebuild the map imagery.

BUILDING ONLINE, USING OFFLINE

Online map sources need connectivity during manufacture. The finished TPKX / MBTiles files are local.
